

# MEDS® - The Medicaid Eligibility Decision System

## Submit Medicaid Cases Electronically to NYC's Eligibility Data and Image Transfer System (EDITS)

### DATA TRANSFER

Full roster data can be imported daily via CSV/XML or 834 files

### ELIGIBILITY INQUIRY

Automated eMedNY eligibility checking of members

### AUTOMATIC CASE CREATION

eMedNY data and RS file data are used to determine renewal dates and create cases in MEDS®

### CASE ASSIGNMENT

Cases are assigned to users for processing based on your existing distribution logic

- Paperless Medicaid application and renewal processing, including form creation and signatures, scanned images, submission of cases, and responses from NYC Human Resources Administration (HRA)
- Customizable reporting system with the ability to export data to Excel®
- Built-in support system

RES Systems is proud to offer MEDS®, a robust electronic Medicaid application system that interfaces with EDITS, replacing the paper flow between providers and the New York City Medical Assistance Program (MAP) with electronic transfer of data and images and electronic delivery of eligibility determinations. EDITS currently supports the processing of new MLTC applications and renewals.

With MEDS®, not only can you create and submit the case electronically, but you can generate completed forms and sign them electronically too. The system was designed from the worker's perspective and is simple and intuitive to use for anyone transitioning from the paper process. You will notice increased productivity the first day you start with MEDS®.

MEDS® is also a great tool for managing member retention. The system will ingest your daily roster file and weekly RS file, and be able to manage current eligibility for the full member list with eMedNY batch and real-time lookups. Cases in MEDS® are automatically created and assigned based on the data from these files. Exception reporting allows you to track issues such as:

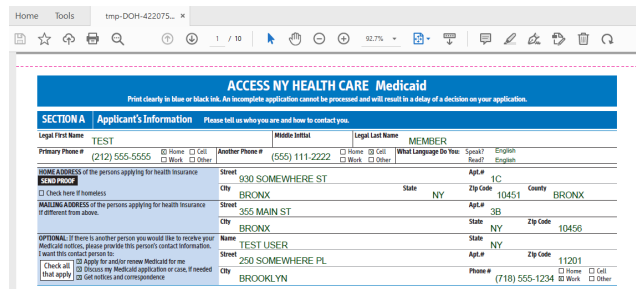

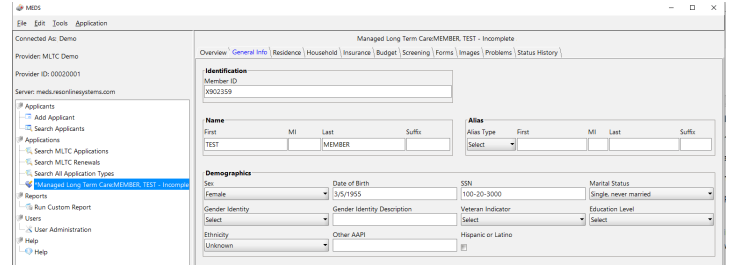

- Members showing active on roster where eMedNY shows ineligible or a different plan
- Members who have changed plans
- Cases where the RS file shows a different case status than in MEDS®
- Cases where the RS file shows a different Medicaid case number than in MEDS®

## Case Processing

A tabbed interface allows for simple, organized data entry, and data validation ensures all entries are in the correct format.

You can then create application and ancillary forms with pre-filled data with the touch of a button. These forms can even be electronically signed and “saved as image” for a completely paperless process.

Finally, scan in supporting documentation and the application is complete! Cases submitted before 5 PM are available for HRA to work on the next business day. Responses from HRA are processed daily. Reports are available to track application status, case activity, EDITS turnaround time, approval rates, and user productivity.

## Features and Benefits

- ❑ Common Medicaid forms can be created with pre-filled data, electronically signed, and saved with the application - no more filling out forms by hand!
- ❑ All scanning functionality is built in to the program - no additional scanning software is required to add supporting documentation to the case
- ❑ Data validation makes sure required data for each case is sent to EDITS in the correct format
- ❑ Automated tracking and date stamping of cases
- ❑ Automated eligibility processing for Medicaid workers resulting in improved decision turn-around times
- ❑ Email notifications alert you when Medicaid updates a case
- ❑ Historical data is kept to track changes in roster status, managed care plan, and renewal due date prior to submission

## Service and Support

- ❑ Technical support
- ❑ Installation and setup (Windows® and MacOS®)
- ❑ Maintenance
- ❑ Support for case issues

Free, unlimited local support is included with MEDS®. Our support team is knowledgeable about the system, the application process, and with Medicaid eligibility rules.
